

Big Button / Picture Button Telephones

6.14

DESCRIPTION

People with cognitive impairment may have difficulty operating everyday devices, such as telephones. As modern technology advances, many phones are becoming smaller and more complicated, and can be challenging if cognitive function and/or vision is impaired.

To help your loved one, consider a simple-to-use, large-button phone, many of which feature picture buttons, SOS buttons, volume control and corded handset. Some units also have additional emergency alerts (worn as a pendant) for greater security and safety.

Prices range from \$55—\$175
